

## FAQ

Does it hurt?

Most clients describe little or no discomfort. A topical anesthetic is used before the procedure to numb the affected area and half way through the procedure as well.

How long is the appointment?

It usually takes about 2 hours, depending on the time spent going over colors and drawing eyebrow shapes. The actual microblading portion lasts about 45 minutes.

How long will they take to heal?

There technically is no down time. For the first 7 days, you'll need to avoid getting them wet, working out or wearing brow makeup. They take about 30 days to completely heal, in which time you may experience mild scabbing. During the healing process it is completely normal to experience some scabbing, some patching and even some loss of pigment.

How do I care for my new brows?

Stay out of the sun and water while they heal. Avoid chlorine, exfoliation creams, and sun exposure; which may cause your color to fade. We recommend applying a small amount of Naysa CBD Tattoo After Care Cream daily for the first 14 days. You can purchase the cream at <https://www.celestialbodydetox.com/product-page/tattoo-care-cream>

When should I get a touch up?

We recommend a touch up between 4-8 weeks after your initial appointment.

Who is not a good candidate for microblading?

Microblading is not recommended for those with oily skin or large pores. We also do not provide microblading for people: under 18 years old, pregnant or nursing, if you have diabetes, glaucoma, skin diseases such as Shingles, psoriasis or eczema on the area of treatment, allergies to makeup, Keloid disorder, HIV/ Hepatitis, skin cancer, hemophilia, or if you're taking skin medications like ro-acutaine

Can microblading be performed over scars?

Yes, however, because we are going over scar tissue the results may vary. Also sometimes additional appointments may be necessary to maintain your brows.
